

The Ultimate Drum Handler

For Plastic, Steel and Fiber Drums

The **ULTRA-GRIP II™** is Valley Craft's top-of-the-line general purpose drum handler. Only the ULTRA-GRIP can save substantial time and effort by providing the operator with the kind of control essential to efficient drum handling.

The versatility of this unit is unmatched by any other. In addition to offering the basic functions of inverting, moving, palletizing and vertically and horizontally stacking drums, the ULTRA-GRIP also provides the operator with three-way dumping action. This unit rotates drums a full 360 degrees to the right or left, and tilts drums forward 125 degrees.

Available with three different styles of rubber-lined jaws, the ULTRA-GRIP conveniently and effectively meets a variety of drum handling needs.

The general purpose **STANDARD ULTRA JAWS** allow the ULTRA-GRIP to handle steel drums and other rigid cylinders 18-28 inches in diameter.

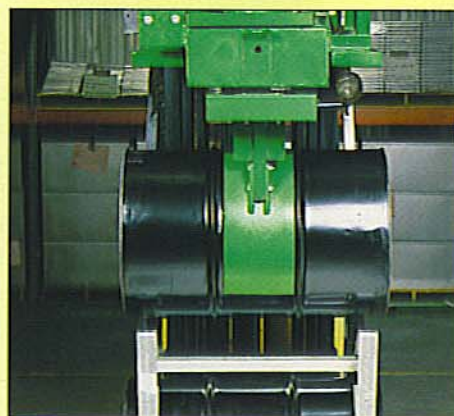

The ULTRA-GRIP's **DRUM HUGGER JAWS** are designed specifically for handling 55-gallon, soft-sided plastic and fiber drums, but they work equally well with 55-gallon steel drums and are perfect for lifting and dumping cumbersome "open-top" drums. They also handle cylinders 23-24 inches in diameter.

The over-sized **GIANT JAWS** are lined with soft white rubber to firmly but gently grip the more fragile fiber drums. The GIANT JAWS handle fiber drums and other cylinders 18-28 inches in diameter.

The ULTRA-GRIP is self-powered and requires two 12-volt, deep-cycle batteries with a recommended size of 12 1/4"L x 6 3/4"W x 9 5/8"H to the top of the terminal. *Batteries are not included.*
